Available Immediately

Summary

Fresh cybersecurity graduate (B.Tech 2026) currently undergoing hands-on SOC analyst training at SIEM Xpert, Bangalore. Comfortable working inside Splunk and Microsoft Sentinel, writing SPL and KQL queries, triaging alerts, and mapping attacker behaviour to the MITRE ATT&CK framework. Experienced in phishing email analysis, network traffic inspection with Wireshark, and documenting indicators of compromise. Seeking a Tier-1 SOC Analyst role in Bangalore to start contributing from day one.

Technical Skills

SIEM Platforms : Splunk Enterprise (SPL), Microsoft Sentinel (KQL), CrowdStrike, Cortex XSOAR

Security Tools : Wireshark, VirusTotal, Any.Run, AbuseIPDB, Sysmon, Windows Event Viewer

Security Domains : Alert Triage, Incident Detection & Response, Phishing Analysis, Network Security Monitoring, Malware Behaviour Analysis, Log Correlation

Frameworks : MITRE ATT&CK, Cyber Kill Chain, Incident Escalation & Reporting

Networking : TCP/IP, DNS, HTTP/HTTPS, DHCP, SMTP - protocol-level understanding for traffic analysis

Languages & OS : Python (scripting, automation), Linux, Windows Event IDs, PowerShell

Soft Skills : Attention to detail, methodical thinking, clear written documentation, calm under pressure

Current Training

SOC Analyst Training

2026 – Present

SIEM Xpert

Bangalore, India

- Receiving structured, hands-on training covering the day-to-day workflow of a Tier-1 SOC analyst in a real operations environment.
- Practical modules include Splunk dashboard creation, SPL query writing, Microsoft Sentinel KQL threat hunting, and incident escalation workflows.
- Working through real-world attack scenarios to build familiarity with common threat patterns and clear incident documentation.

Projects

Phishing Email Analyzer & Gmail Extension Python, Flask

[GitHub](#) | [LiveDemo](#)

- Built a rule-based phishing detection engine that analyses email subjects and bodies and returns a risk score from 0 to 100, giving SOC analysts a fast first-pass triage tool.
- Detection covers five categories – urgency language, suspicious URLs, generic greetings, sensitive data requests, and social engineering phrases - each carrying a configurable weight in the scoring engine.
- URL analysis catches HTTP links, IP-based hosts, URL shorteners, suspicious TLDs, and lookalike subdomain spoofing using regular expressions
- Supports PDF email uploads via a tiered parsing pipeline (pypdf → PyMuPDF → OCR) and exports analysis reports in JSON and PDF formats.
- Includes a Gmail Chrome Extension (Manifest V3) that injects a Scan Email button into Gmail and displays results as an in-page overlay; deployed on Vercel with 22 passing unit tests.

SOC Responsibilities (Labs & Simulations)

- Monitored SIEM dashboards for incoming alerts and triaged by severity, asset criticality, and likely impact before escalating or closing.
- Investigated phishing emails by examining headers, sender reputation, embedded URLs, and attachment behaviour to determine legitimacy.
- Investigated endpoint alerts using Sysmon logs and Windows Event Viewer, correlating process trees and network connections.
- Escalated confirmed incidents to Tier-2 following defined runbooks, writing clear handoff notes with all relevant evidence.
- Maintained detailed incident logs throughout each investigation – timelines, actions taken, findings, and remediation steps.

Certifications & Training

SIEM Xpert – SOC Analyst Program

SIEM Xpert, Bangalore

2026 – Present
Currently Enrolled

- Hands-on professional training in SIEM operations, log correlation, threat detection, and SOC analyst workflows.

Cybersecurity & Ethical Hacking

View Certificate | SkillSurprise

2025

- Ethical hacking methodologies, penetration testing, vulnerability assessment, and defensive security.

TryHackMe – Advent of Cyber 2025

View Certificate | TryHackMe

2025

- Completed all 24 challenges covering SOC operations, log analysis, threat detection, and defensive security.

SOC Level 1 Learning Path

TryHackMe | Modules: SIEM, Phishing Analysis, Network Analysis, Incident Response

In Progress

- Actively completing structured SOC modules covering real-world alert triage, incident response, and network forensics

Education

Bachelor of Technology (B.Tech) in Cybersecurity

Specialization: Cybersecurity

2022 – 2026

Andhra Pradesh, Nellore, India

CGPA: 7.96

Relevant Coursework: Network Security, Malware Analysis, Incident Response, SIEM Operations, Ethical Hacking

Achievements

2nd Place – Malware Development Hackathon SkillSurprise (2025)

- Placed second among all competing teams; recognised for technical depth and the quality of defensive IOC documentation produced alongside the build

TryHackMe – Advent of Cyber 2025 | Full Completion

- Finished all 24 daily SOC and defensive security challenges, maintaining consistent output throughout the month-long event
