► Summary

Cybersecurity graduate (B.Tech 2026), with hands-on experience on SOC environment, working on Security Monitoring, Alert Triage, Phishing Analysis, and Incident investigation. Well-versed with tools like Splunk (SPL), Microsoft Sentinel (KQL), Wireshark, Sysmon, Windows event viewer. Have worked on MITRE ATT&CK, Service-now ticketing, incident triage and escalation and SOC documentation. Developed security automation and phishing detection tools using Python, FastAPI, n8n. Seeking a position as a Tier-1 SOC Analyst.

► Technical Skills

- **SIEM:** Splunk Enterprise (SPL), Microsoft Sentinel (KQL)
- **EDR & Endpoint:** Sysmon, Windows Event Viewer, CrowdStrike Falcon
- **Security Tools:** Wireshark, VirusTotal, Cortex XSOAR
- **Ticketing / ITSM:** ServiceNow
- **SOC Operations:** Alert Triage, Incident Investigation, Incident Escalation, Incident Documentation, Log Correlation, Threat Hunting
- **Security Analysis:** Phishing Analysis, Malware Analysis, Network Traffic Analysis
- **Frameworks:** MITRE ATT&CK, Cyber Kill Chain
- **Networking:** TCP/IP, DNS, HTTP/HTTPS, DHCP, SMTP
- **Programming & Automation:** Python, PowerShell, FastAPI, REST APIs, Webhooks, n8n
- **Operating Systems:** Windows, Linux

► Education

Bachelor of Technology (B.Tech) in Cybersecurity

2022 – 2026

Specialization: Cybersecurity

Andhra Pradesh, Nellore, India

CGPA: 7.96

Relevant Coursework: Network Security, Malware Analysis, Incident Response, SIEM Operations, Ethical Hacking

► Current Training

SOC Analyst Training | SIEMXpert | 2026 - Present

- Hands-on training based on Tier-1 SOC workflows, including alert monitoring, triage, investigation, escalation, and incident documentation.
- Created Splunk dashboards and practiced SPL queries for security monitoring and investigation.
- Practiced Microsoft Sentinel KQL queries and threat-hunting workflows.
- Investigated simulated attack scenarios and documented findings based on severity, impact, and available evidence.
- Practiced incident tracking and escalation workflows using ServiceNow.

► Projects

Phishing Email Analyzer & Gmail Extension | Python, Flask, Chrome Extension

GitHub | LiveDemo

- Developed a rule-based phishing detection engine that analyzes email content, suspicious URLs, and social-engineering indicators.
- Implemented PDF email analysis with automated JSON/PDF security reports for investigation and documentation.
- Integrated the analyzer with Gmail through a Chrome Extension to support real-time phishing assessment.
- Designed the workflow to assist SOC analysts with faster phishing triage and risk assessment.

► SOC Device Integration and Log Normalization Platform

SOC Device Integration & Log Normalization Platform / n8n | Splunk | Windows | Linux | Firewall Logs

- Developed an automated SOC monitoring workflow for ingesting security-device logs into a central analysis pipeline.
- Log collection, parsing, normalization, device identification, and routing implemented with n8n.
- Normalized events ingested into Splunk for central monitoring and investigation.
- Detection-specific workflows built for Windows, Linux, and firewall logs to enable standardized analysis and correlation.

► SOC Lab Experience

- Monitored SIEM alerts and performed first-level triage based on priority, asset criticality, and impact assessment.
- Investigated phishing-related incidents by analyzing email headers, sender reputation, embedded URLs, and attachment content.
- Explored endpoint security alerts with Sysmon and Windows Event Viewer tools, investigating process and network activity. Investigated events and documented the analysis, suggested remediation, and escalated through ServiceNow ticketing system.

► Certifications & Training

Cybersecurity & Ethical Hacking

2025

[View Certificate](#) | [SkillSurprise](#)

- Ethical hacking methodologies, penetration testing, vulnerability assessment, and defensive security.

SOC Level 1 Learning Path

In Progress

[TryHackMe](#) | SIEM, Phishing Analysis, Network Analysis, Incident Response

- Actively completing structured SOC modules covering real-world alert triage, incident response, and network forensics

► Achievements

2nd Place - Malware Development Hackathon | SkillSurprise (2025)

- Placed 2nd among participating teams with a focus on defensive analysis and IOC documentation.
- Produced technical IOC documentation alongside the project.

TryHackMe - Advent of Cyber 2025 | Full Completion

- Completed all 24 challenges covering SOC operations, log analysis, threat detection, and defensive security.
